Thyroid Hormone Synthesis

IODINE
Recommended Daily Intake

Hyperthyroidism - anti-thyroid drugs

Selenenyl Iodide – Non-existent Compound?

For a long time, uncharged covalent selenium iodides have been regarded as non-existent .

W. E. Dasent, *Nonexistent compounds*, Marcel Dekker, New York (1965) .

Isodesmic Equation

trisyl

supermesityl

du Mont, et al. *Angew. Chem. Int. Ed.* 1987, 26, 780.

Anti-thyroid Drugs – Treatment for Hyperthyroidism

- Inhibition of thyroid peroxidase (TPO) by coordination to iron
- Donor-acceptor complexes with molecular iodine
- PTU and MTU – Block $T_4 \rightarrow T_3$ conversion (ID-I)

PTU

MTU

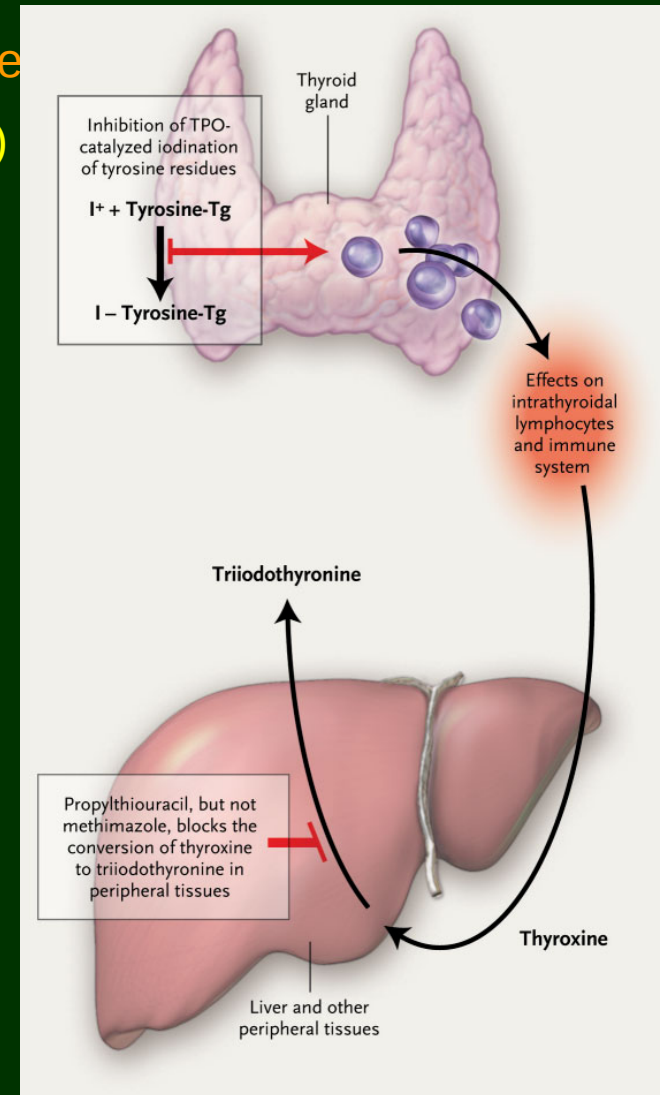

MMI

CBZ

Cooper, D. S. N. *Engl. J. Med.* 2005, 352, 905.

Interactions of Antithyroid Drugs with Iodine

Isaia *et al.* *J. Am. Chem. Soc.* 2002, 124, 4538.
J. Med. Chem. 2008, 51, 4050.

Hadjiliadis *et al.* *Eur. J. Inorg. Chem.* 2003, 1635.

Se-MMI – Tautomeric Structures

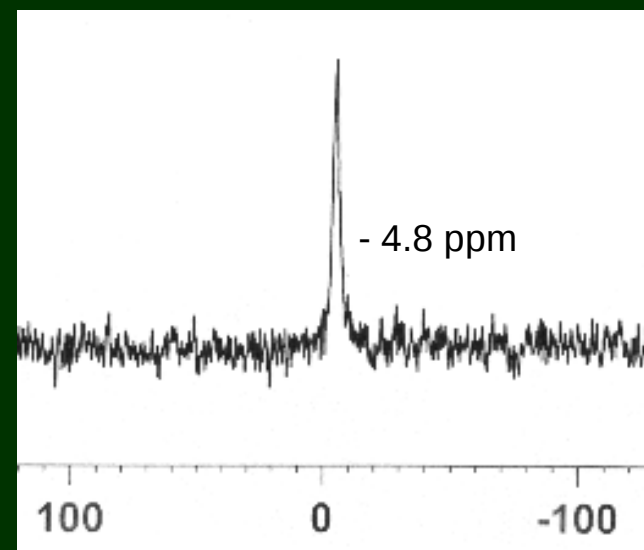

(1a) E = S

(2a) E = Se

(1b) E = S

(2b) E = Se

E = O, does not exist; E = Te, very unstable

¹³C NMR: $^1J_{\text{Se-C}} = 220$ Hz

C-Se single bond, $^1J_{\text{Se-C}} \sim 110\text{-}140$ Hz; C=Se double bond, $^1J_{\text{Se-C}} \sim 220\text{-}240$ Hz

Roy, Nethaji & Mugesh, *J. Am. Chem. Soc.* 2004, 126, 2712.

Roy & Mugesh, *J. Am. Chem. Soc.* 2005, 127, 15207.

Roy, Das & Mugesh, *Inorg. Chim. Acta.* 2007, 360, 303.

Interactions of Antithyroid Drugs with Iodine

Roy, Nethaji, & Mugesh, *Org. Biomol. Chem.*, 2006, 4, 2883.

Hydrolysis by Metallo- β -Lactamases

Tautomeric Forms of MTT and MDT

Roy, G.; Mugesh, G. *J. Am. Chem. Soc.* 2005, 127, 15207.

Roy, G.; Nethaji, M.; Mugesh, G. *J. Am. Chem. Soc.* 2004, 126, 2712.

Bhuyan, B. J.; Mugesh, G. *Inorg. Chem.* 2008, 47, 6569.

Inhibition of LPO-catalyzed Iodination

+

Tamilselvi & Mugesh, *ChemMedChem*, 2009, 4, 512.

No	Compound	Structure	IC ₅₀ values (μM)
1	MMI		4.09 ± 0.56
2	MTT		7.29 ± 0.77
3	MDT		3.04 ± 0.65

Sulfur-Iodine Interactions

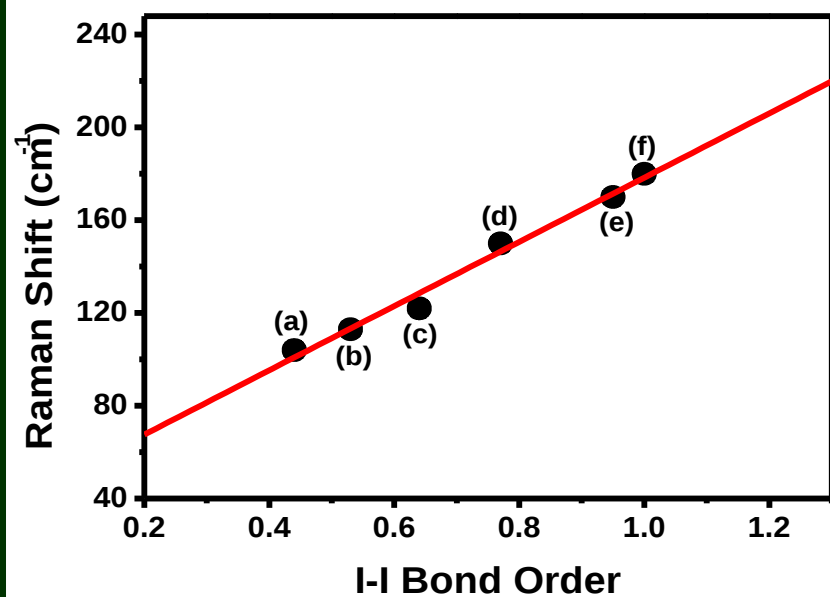

Tamilselvi, A.; Mugesh, G.

Bioorg. Med. Chem. Lett. 2010, 20, 3692.

Sulfur-Iodine Interactions

Thione-iodine complexes (a) DMETT.I₂,
 (b) MMI.I₂, (c) MDT.I₂, (d) PTU-I₂,
 (e) MTDT-I₂, (f) free iodine

Tamilselvi, A.; Mugesh, G.
Bioorg. Med. Chem. Lett. 2010, 20, 3692.

Thyroid hormone binding in Transthyretin (TTR)

- Halogen binding sites P1, P2, P3 and their symmetry related pairs P1', P2', P3' in thyroid hormone transport protein Transthyretin.
- T_4 (ball and stick - red) binding is greatly influenced by charged residues Lys15 and Glu54 in P1 pocket.

Halogen bonding in human TTR-T4 complex

- Hydrogen bonding with Lys15 and Glu54
- 4-phenolic hydroxyl group forms water mediated hydrogen bond to Ser117.

Acta Cryst. 1996, D52, 758-765.

Halogen Bonding

- 5'-I atom of phenolic ring interacts with Leu110 backbone N atom in P3 pocket (I.....N, 3.5 Å)
- 3'-I atom interacts with the carbonyl oxygen of Ala109 in P2 pocket formed by other monomer of the protein (I.....O, 2.8 - 3.3 Å)

Binding of T3 with TTR

J. Biol. Chem. 2004, 279, 25, 26411 - 26416.

Binding of 3,3'-T2 with human TTR

Superimposed structure of T4 (thick line) and T3 (light line) bound to human TTR. Amino acids are represented by single letter codes.

J. Biol. Chem. 1992, 267, 1, 353-357.

- 3'-I interacts directly with Ser117 side chain hydroxyl (I...O, 2.86 Å) although a series of contacts with 108-110 and 117-119 residues are possible with distances between 2.86 Å & 3.72 Å)

Binding of Thyroid Hormones to TTR

The binding affinity decreases upon removal of iodines.

J. Biol. Chem. 1992, 267, 1, 353-357.

Iodothyronine Deiodinases

The entire body metabolism depends on the amount of thyroid hormones produced.

INACTIVATION

Behne et al. *BBRC*, 1990, 173, 1143; Berry et al. *Nature* 1991, 349, 438.

Iodothyronine Deiodinase Mimics

Goto et al. *Angew. Chem. Int. Ed.* 2010, 49, 545.

- Enol-keto tautomerism is required
- Outer ring iodines are more reactive than the inner-ring ones

Iodothyronine Deiodinase Mimics

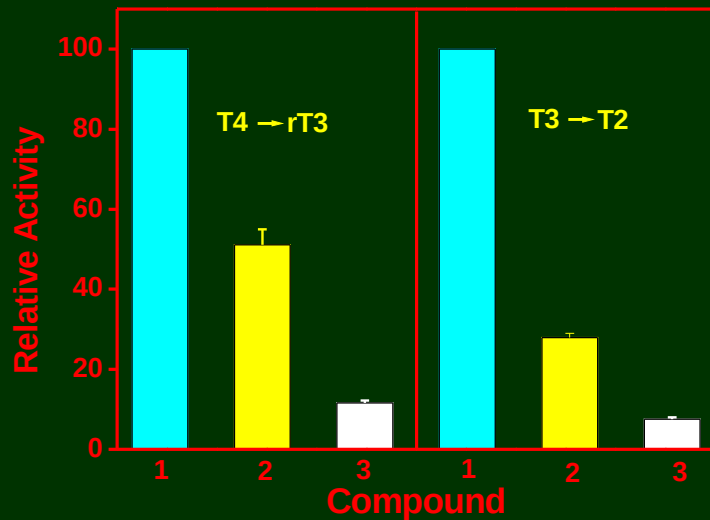

- Physiologically relevant conditions
- Highly specific to inner-ring deiodination

- Quantitative conversion of T4 to rT3 in 30 h

Manna and Mugesh, *Angew. Chem. Int. Ed.* 2010, 49, 9246 - 9249.

Iodothyronine Deiodinase Mimics

- The rate of deiodination is highly pH dependent.
- A thiol adjacent to selenol is important for the deiodination.
- Replacing -SeH with -SH reduces the activity.

Possible Mechanism

HumanD3	: RPLVLNFGSCT*PPF
RatD3	: RPLVLNFGSCT*PPF
ChickenD3	: RPL I LNFGSCT*PPF
XenopusD3	: RPLV V NFGSCT*PPF
RanaD3	: RPLVLNFGSCT*PPF
TilapiaD3	: RPL I LNFGS C S*PPF
Consensus	RPLvLNFGSct*PPF

- Positive charge on inner-ring iodine decreases upon deiodination of T4.
- Halogen bonding may play an important role in the inner-ring deiodination.

Iodothyronine Deiodinase Mimics

Does an increase in reactivity change the selectivity??

Manna and Mugesh, Unpublished results.

Iodothyronine Deiodinase Mimics

- An increase in the reactivity does not change the selectivity, but it leads to further deiodination.
- rT3 undergoes a further deiodination to form T2.

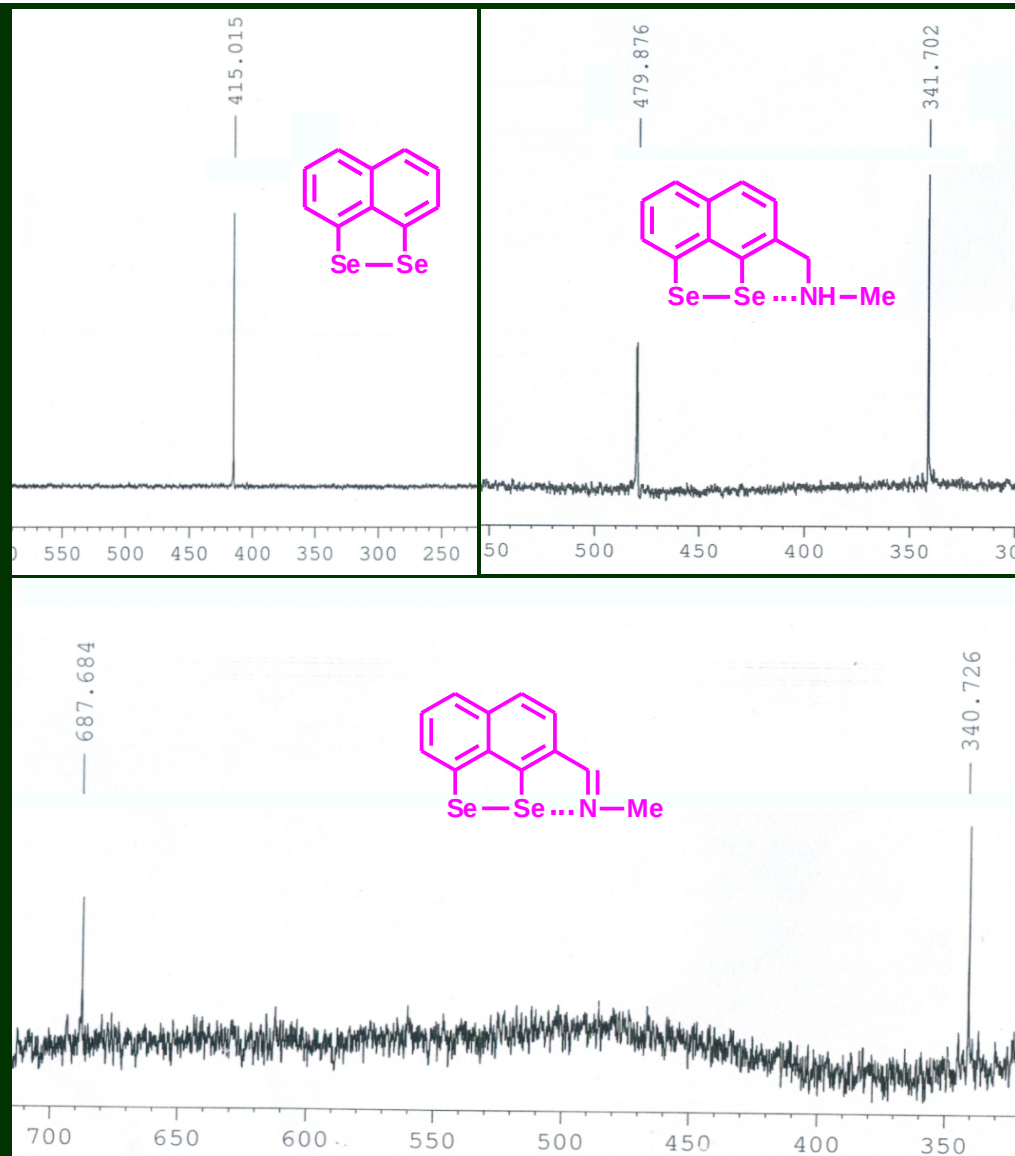

Manna and Mugesh, Unpublished results.

Iodothyronine Deiodinase Mimics

Manna and Mugesh, Unpublished results.

Effect of Se...N interactions on ^{77}Se NMR

Interactions of Antithyroid Drugs with Iodine

Far-IR spectra

141: $\nu(\text{I-I})$ stretching vibration mode.

Di-iodine vapor gives a strong band at 216, which appears at 180 in the solid state.

This band shifts to lower wavenumbers upon coordination to a donor atom, reflecting a reduction in the I-I bond order.

Roy, Nethaji, & Mugesh, *Org. Biomol. Chem.*, 2006, 4, 2883.

FT-Raman spectra

✓ I_3^- can exist as a real I_3^- entity or an $\text{I}^- \cdot \text{I}_2$ adduct.

110 : normally attributed to the symmetric stretching of I_3^- – symmetric ion – one Raman active band.

143 : the anti-symmetric stretching may become Raman active.
